

TAILBOARD TRAINING

VFIS “**Tailboard Training**” is a bi-weekly loss prevention program for clients. The program is intended to provide information on current safety issues facing emergency responders in a format that will quickly and effectively communicate a safe practice to implement and relate directly to your organization. These are released every other Thursday by VFIS.

EQUIPPING THE REHABILITATION UNIT

Rehabilitation is the rest, rehydration, nutritional support and medical monitoring of emergency responders and fire department members during emergency incidents.

Emergency responders and commanding officers may need to help personnel maintain a level of physical endurance in order to perform at an emergency. Rehabilitation practices may help personnel perform those duties.

It's important for the rehab unit/operation to have specific equipment in an appropriate location at the incident scene. The ideal rehab sector equipment includes:

- Triage (rehab) tags
- Stretcher
- Oxygen & supplies
- Drinking water & cups
- Ice/cooling supplies/water vapor (as event/scene appropriate)
- Warming supplies/heater (as event/scene appropriate)
- Chairs (as event/scene appropriate)
- Shelter (as event/scene appropriate)
- EKG monitor (ALS)
- Medications (ALS)
- IV fluids (ALS)

Have a discussion about the rehabilitation process. Does your rehabilitation system include these components? If not, who should be contacted to assure they are integrated into your system?

The objective is to complete the training in 15 minutes or less with participants leaving the session with a better understanding of how to keep from getting hurt.

SCENARIO

1. Review any existing protocols, strategic approaches or SOGs on this topic prior to conducting the *Tailboard Training*.

2. Ask a member to review the last incident where this scenario may have existed.
3. Have the group discuss the actions that were taken.
4. Were they done in a safe manner?
5. Were there any actions taken that could have been done differently?

NOTE: Most “after action reviews” such as this develop a number of suggestions that actions should have been or should be done differently. The officers need to balance this immediate reaction to the reality of the situation. Was the outcome positive or negative? Would the outcome have changed if actions were done differently? Should any additional safety precautions have been taken? If so, how and what?

1. **Have you had any such incidents in your department or in nearby departments? If so, describe a type of injury, accident, or incident that has actually occurred**
2. **Commentary on how to better deal with this issue**
3. **Review of any related departmental standard operating guidelines that may apply**
4. **Have a short open dialogue on the subject with your personnel.**
